High flexible hose with multi-layer foamed structure Soft&Flex.

5-layer hose : outer cover in PVC high resistant to UV rays with polyester knitted reinforcement and white smooth bi-layer inner tube.

- 1 Cover in yellow soft PVC
- 2 4 Intermediate layers in foamed white PVC
- 3 Textile knitted reinforcement
- 5 Inner wall in Blue soft PVC

Applications

- Watering
- Washing with cold water
- Water supply

All sectors of activity

Advantages

The multi-layer structure with the exclusive knitting provides Super Tricoflex with both high flexibility for an easy handiness and an excellent resistance in the repeated flexions, as well as low deformations under pressure. In addition, the very smooth aspect of the internal wall facilitates the flow and

guarantees its regularity.

Very thick and made with quality materials, Super Tricoflex remains light thanks to its foam structure. It presents a remarkable resistance to the ageing with a good conservation of the flexibility. Its outside cover in yellow PVC brings a good protection against the abrasion and the ultraviolet rays.
